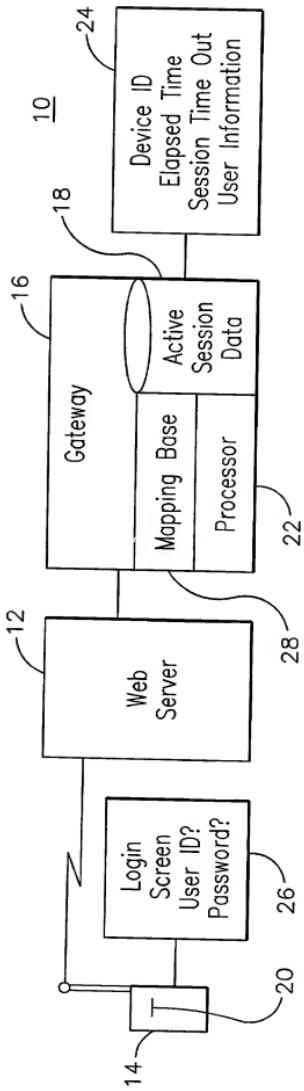

FIG. 1

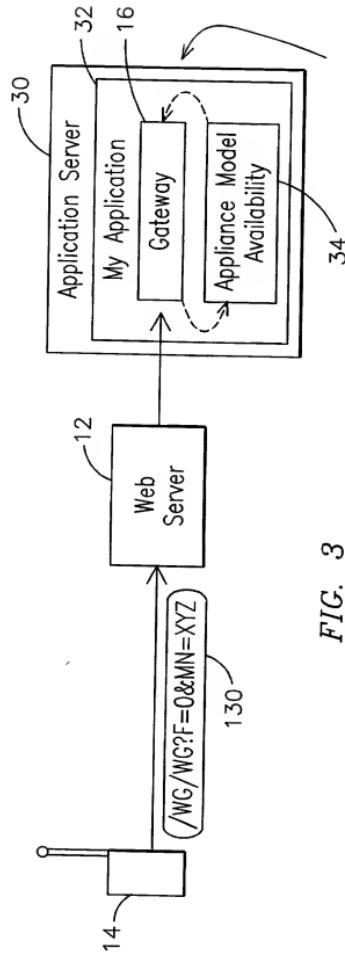

FIG. 3

1062687 - 022613

The screenshot shows a Microsoft Internet Explorer window with the title bar "CustomerNet - Microsoft Internet Explorer". The menu bar includes "File", "Edit", "View", and "Address". The main content area displays a table:

Model #	Avail.
TX20DAD	0
TX20JABA	22
TX20JABWW	0
TX20RBA	121
TX20RBWH	327
TX20RBWW	0
TX20KAD	0
TX20KWH	0
TX20WW	0

CustomerNet - Microsoft Internet Explorer		100	
File	Edit	View	Address
Model #	Aval.		
TFX20LAD	0		
TFX20AABA	22		
TFX20ABA/BWW	0		
TFX20URBAA	121		
TFX20URBWH	327		
TFX20URBWW	0		
TFX20KLAD	0		
TFX20KLWH	0		
TFX20RMAD	0		
TFX20SABA	1		
TFX20SABA/BWW	0		
TFX20SABA/W	1		
TFX22APDAA	12		
TFX22A2DDBB	7		
TFX22APDWW	0		
TFX22CRAAA	0		
TFX22CRBBB	0		
TFX22CRBWW	0		
TFX22CDAAA	0		
TFX22CDDBB	0		
TFX22CDGCC	19		
TFX22CDGMW	54		
TFX22CXKWW	0		
TFX22GBFWWW	0		
TFX22JABA	0		

The diagram illustrates how the `action` attribute of an HTML form is affected by compression, comparing the state before and after compression.

Before Compression:

110 → **After Compression:** 120

110 shows the original code:

```

<BODY>
  <form method="post" action="/AppServer/MyApplication/
ControllerComponent?Function=Availability">
    <CENTER><BR>
      <TABLE>
        <TR>
          <TD><b>Model#</b></TD>
          <TD align="right"><b>Avail.</b></TD>
        </TR>
        <TR>
          <TD>
            <A href="/AppServer/MyApplication/ControllerComponent?Function=
Availability&DeleteCustomerCode=yq56&ModelNumber =XYZ">XYZ</A>
          </TD>
          <TD align="right">0
          </TD>
        </TR>
      </TABLE>
    <CENTER><BR>
  </BODY>

```

120 shows the compressed code:

```

<BODY>
  <form method=" post" action="/WG/WC?F=0">
    <CENTER><BR>
      <TABLE>
        <TR>
          <TD><b>Model#</b></TD>
          <TD align="right"><b>Avail.</b></TD>
        </TR>
        <TR>
          <TD>
            <A href="/WG/WC?function=1&CC=yq56&MN=XYZ">XYZ</A>
          </TD>
          <TD align="right">0
          </TD>
        </TR>
      </TABLE>
    <CENTER><BR>
  </BODY>

```

A curved arrow points from the original code (110) to the compressed code (120), indicating the transformation. Another curved arrow points from the compressed code (120) back to the original code (110), indicating decompression.
